

## Network Protection

Providing protection at the user level is only half the battle in protecting your church against web based threats and malicious network activity.

Network intrusion and unauthorized web browsing can open your church to a variety of attacks. A Unified Threat Management Appliance is a dedicated premise-based solution to prevent threats at the network level.

In addition to protecting your network from attacks, the UTM appliance allows you to manage your traffic, filtering for undesired content, bandwidth management and known malicious URLs. Churches have the ability to obtain reports on network usage by user, increasing the ability to enforce usage policies and maintain accountability.

### Features:

- ✓ Premise based Unified Threat Management appliance.
- ✓ Protects against network intrusion and network attacks.
- ✓ Allows web content filtering based on categories, i.e., shopping, gambling, dating.
- ✓ Application level bandwidth throttling and prioritization.
- ✓ Easy-to-read automated Network usage reporting.
- ✓ Includes Virtual Private Network (i.e. VPN)
- ✓ Next Day Hardware Replacement Available.
- ✓ Unlimited 8am-5pm M-F Technical Support.

Network Protection Pricing	
UTM Appliance*	\$500.00 one time cost
UTM Appliance*-Monthly Cost	\$99.00 per month

\* Does not include onsite installation, quotes for onsite available upon request.

\* Multiple internet connections or internet connections over 100 MB are quoted on an individual basis.

### How to get started:

Send a request to [CovTech@CovChurch.org](mailto:CovTech@CovChurch.org). We will contact you to discuss the process of setting up the UTM and discuss installation options.
